

Economic update

During the calendar year of 2017, there was a major shift in expectations in financial markets in terms of how soon the bank rate would start on a rising trend. After the UK economy surprised on the upside with strong growth in the second half of 2016, growth in 2017 was disappointingly weak in the first half of the year which meant that growth was the slowest for the first half of any year since 2012. The main reason for this was the sharp increase in inflation caused by the devaluation of sterling after the EU referendum, feeding increases into the cost of imports into the economy. This caused a reduction in consumer disposable income and spending power as inflation exceeded average wage increases. Consequently, the services sector of the economy, accounting for around 75% of GDP, saw weak growth as consumers responded by cutting back on their expenditure. However, growth did pick up modestly in the second half of 2017. Consequently, market expectations during the autumn, rose significantly that the MPC would be heading in the direction of imminently raising the bank rate. The minutes of the MPC meeting of 14 September indicated that the MPC was likely to raise the bank rate very soon. The 2 November MPC quarterly inflation report meeting duly delivered by raising the bank rate from 0.25% to 0.50%. The 8 February MPC meeting minutes then revealed another sharp hardening in MPC warnings on a more imminent and faster pace of increases in the bank rate than had previously been expected.

Market expectations for increases in bank rate, therefore, shifted considerably during the second half of 2017-18 and resulted in investment rates from 3 – 12 months increasing sharply during the spring quarter.

PWLB borrowing rates increased correspondingly to the above developments with the shorter term rates increasing more sharply than longer term rates. In addition, UK gilts have moved in a relatively narrow band this year, (within 25 bps for much of the year), compared to US treasuries. During the second half of the year, there was a noticeable trend in treasury yields being on a rising trend with the Fed raising rates by 0.25% in June, December and March, making six increases in all from the floor. The effect of these three increases was greater in shorter terms around 5 year, rather than longer term yields.

The major UK landmark event of the year was the inconclusive result of the general election on 8 June. However, this had relatively little impact on financial markets.
