## MESSAGE FROM CLLR SARAH KERR, EXECUTIVE MEMBER FOR CLIMATE EMERGENCY & RESIDENT SERVICES

We are in the middle of a global climate crisis caused by human emissions and activities. We're experiencing the breakdown of climate and ecological systems, resulting in rapidly declining biodiversity and more extreme weather events. The recent report of the Intergovernmental Panel on Climate Change outlined that climate impacts are intensifying and growing more rapidly than originally anticipated.

The impacts of climate change are not confined to some faraway countries. We have already begun to experience them

here in Wokingham Borough. The increase in flooding, the higher number of heatwaves and more unpredictable weather events are the signs that climate change is already happening here, with repercussions on the borough's economy and infrastructure, and on the quality of life of our residents.

Within the last year, Wokingham Borough, as the rest of the UK, has seen dramatic rises in energy prices, which has exacerbated fuel poverty. The cost-of-living crisis has made everyday goods and services more expensive. These crises have affected us all, but particularly the most vulnerable in our society. The climate emergency is deeply intertwined with the cost of living and fuel poverty crisis. Failing to act

on climate change will result in higher energy prices, impacting the cost of living further and affecting our quality of life.

Luckily, there is something we can do now to avoid or at least deflect the worst impacts of climate change. And not only can we do something: we have a responsibility to do so for future generations. To tackle climate emergency, it is key that we decarbonise our economy and infrastructures, and this is where the Climate Emergency Action Plan comes in. It is our collective plan as a Borough which lays out the actions, we have committed to deliver to reach our 2030 goal. It is a living document, regularly updated, to ensure we take into account global and national progress, policy changes, and the latest technological developments. This report has incorporated the recommendations made by the Community Deliberative Process run in 2022 through involvement with our community to identify solutions to address the climate crisis at a local level and design a vision for a carbon neutral Borough.

We recognise that we cannot achieve our carbon neutrality goal by working in isolation. We need more resources and support from Central Government to deliver the bold decarbonisation actions set out in this plan. We also need our society including residents, businesses, schools, voluntary and community organisations to come together and contribute to the delivery of the actions set out in this Plan. By empowering our community to take action locally, we can build momentum for change and drive real progress toward a more sustainable and resilient Borough.

## OUR CLIMATE EMERGENCY RESPONSE

In July 2019, Wokingham Borough Council (WBC) members unanimously declared a climate emergency. The declaration commits WBC to do as much as possible to achieve carbon neutrality by 2030. Subsequently, the council published its first Climate Emergency Action Plan (CEAP).

The CEAP establishes 10 key priority areas and 102 actions to mitigate CO<sub>2</sub> emissions and achieve our 2030 goal.

These are: **Transport, Renewable Energy Generation, Building Retrofitting, Carbon Sequestration, Schools, Waste & Recycling, New Developments, Procurement, Engagement, Council specific actions.**

This progress report is the latest iteration and details the progress against each action and associated benefits and carbon savings the council plans to deliver by 2030, based on what is possible in current circumstances. This report covers our progress in the year 2022 (April to April).

This report includes the recommendations that were shared by our residents, businesses, local organisations, schools and other stakeholders during the Community Deliberative Process “Let’s Talk Climate” that took place in early 2022. Our Community Deliberative Process has helped us understand the views of our community on the council’s response to climate change, while raising the profile of this Climate Emergency Action Plan. Following this, we will continue to engage residents, businesses, local organisations, schools and other stakeholders in discussions around climate emergency and empower them to take action and support our aspiration to become a carbon neutral Borough. We will listen to and learn from our residents, ensuring everyone can take action for a just transition to a more sustainable future.

The climate emergency affects us all, but we are acutely aware that those most at risk from the impacts of climate change include people with respiratory health conditions, children, older adults, people on low income and people from minority backgrounds. WBC is committed to tackling inequality and promoting inclusion in the delivery of this Climate Emergency Action Plan. We conduct Equality Impact Assessments on all significant projects, to identify and act on impacts on different groups of people at all stages of planning and delivery.

For enquires about this report, please email Wokingham Borough Council's Climate Emergency team at:

**[climate.emergency@wokingham.gov.uk](mailto:climate.emergency@wokingham.gov.uk)**

## A Carbon Neutral Borough

**In a carbon neutral Wokingham borough, our community would breathe clean air and enjoy clean and green bio-diverse spaces. People would walk, wheel, scoot or cycle, use accessible public transport and low-emission vehicles. Homes, businesses, places of work and leisure would be low-carbon and energy efficient, powered by renewables and use innovative technologies that pave the way forward for future generations. Wokingham would be an inclusive and diverse community, where everyone plays their part in contributing towards a low-carbon future.**

*A dream for a carbon neutral Borough, developed following the "Dream session" of the 2022 Community Deliberative Process "Let's Talk Climate"*

## OUR CLIMATE EMERGENCY ACTION PLAN PROGRESS

### 1. TRANSPORT

- 230 accessible active Electric Vehicle (EV) sockets available around the Borough
- 94 of these installed as part of the 'on street charging scheme'
- 3 cargo bikes purchased by the Council available for deliveries.

### 2. RENEWABLE ENERGY GENERATION

- generation of 27,113 MWh of renewable electricity in the Borough saving 6,930 tCO<sub>2</sub>e\*.

### 3. RETROFITTING BUILDINGS

- successful bid under the Social Housing Decarbonisation Fund to bring approx. 110 homes to an EPC C rating by 2025
- Over 1600 households getting assistance so far from the 'Help to Heat' scheme.

### 4. CARBON SEQUESTRATION

- 25,910 trees planted to date have contributed towards absorbing an estimated 3,886 tCO<sub>2</sub>e\*.

### 5. SCHOOLS AND YOUNG PEOPLE

- Teacher Climate Summit event hosted in July 2022 attended by representatives from 33 schools from around the Borough.

\*tonnes of carbon dioxide equivalent (tCO<sub>2</sub>e)

## OUR CLIMATE EMERGENCY ACTION PLAN PROGRESS

### 6. WASTE & RECYCLING

- 25 Total waste including recycling in 2022 reduced by 5915 tonnes compared to 2021
- Recycling rate of 53%.
  - 80,758 tCO<sub>2</sub>e\* savings in total and 1.15 tCO<sub>2</sub>e\* per household.

### 7. NEW DEVELOPMENT

- Adoption of Climate Change Interim Policy Position Statement to ensure Climate Emergency is a key material consideration when assessing planning applications
- Social housing at London Rd and Groveland sites received SAP\*\* A rating status.

### 8. PROCUREMENT

- Carbon reduction plan and emissions reporting now required for substantial contracts.

### 9. ENGAGEMENT AND BEHAVIOUR CHANGE

- 'Let's Talk Climate' process involved 60 community representatives and 140 residents to gather recommendations around our climate work and vision
- The climate emergency newsletter continues to be successful, with now over 6,000 subscribers
- Online Planet Pledge campaign launched to inspire people to reduce their carbon footprint.

### 10. COUNCIL SPECIFIC ACTIONS

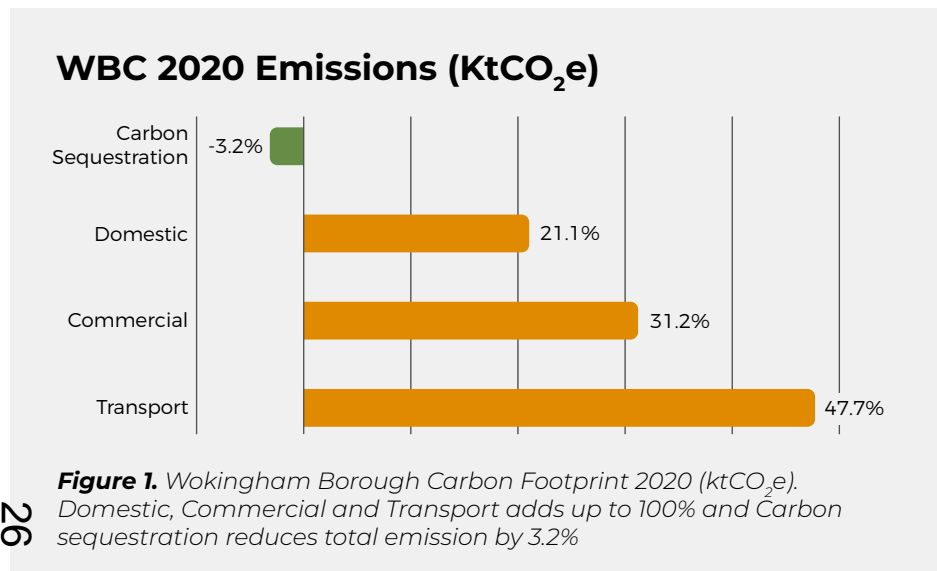

- Dinton Activity Centre and Woodley library are Net Zero buildings
- Carnival Hub has implemented new measures to improve efficiency
- A Net Zero Heroes team of council staff has been launched to engage with council staff in reducing their carbon footprint.

\*tonnes of carbon dioxide equivalent (tCO<sub>2</sub>e)

\*\*The Standard Assessment Procedure (SAP) is the methodology used by the government to assess and compare the energy and environmental performance of dwellings.

## CURRENT AND FUTURE EMISSIONS

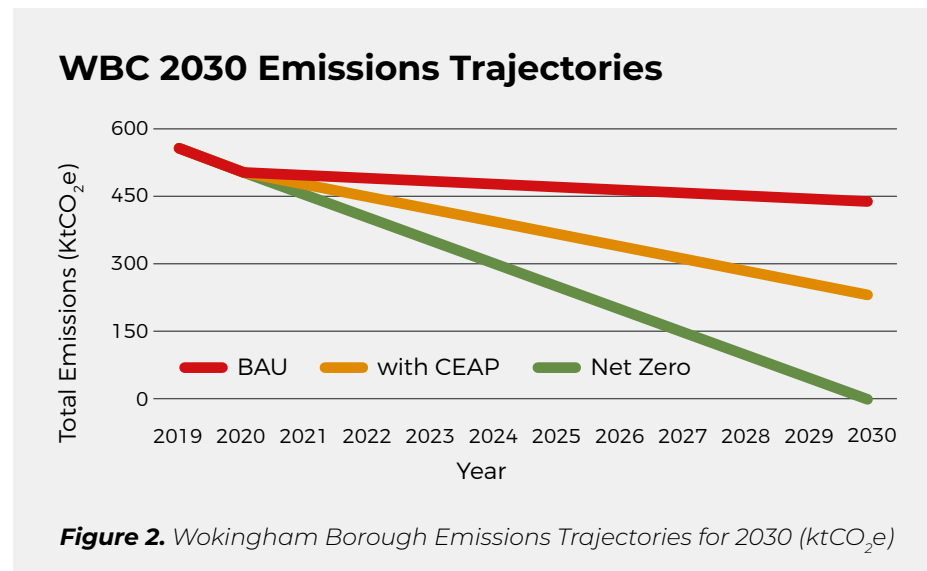

26

Wokingham Borough’s carbon footprint as of 2020 was 505 ktCO<sub>2</sub>e, with the breakdown of the three main sectors this is attributed to shown in **Figure 1**. This incorporates a negative figure for carbon sequestration (e.g. tree planting) and is based on government data and reported three years in arrears (DESNZ 2020)<sup>6</sup>. The full breakdown is available in Appendix 2.

**Figure 2** shows Wokingham Borough Emissions Trajectories for 2030. Current business as usual (BAU) projections from SCATTER, follow a methodology based on numerous government strategies and incorporated targets, and estimate a 10% fall in emissions from 2020 to 2030 based on the UK doing minimal mitigation actions. This is achieved through contributing factors such as central

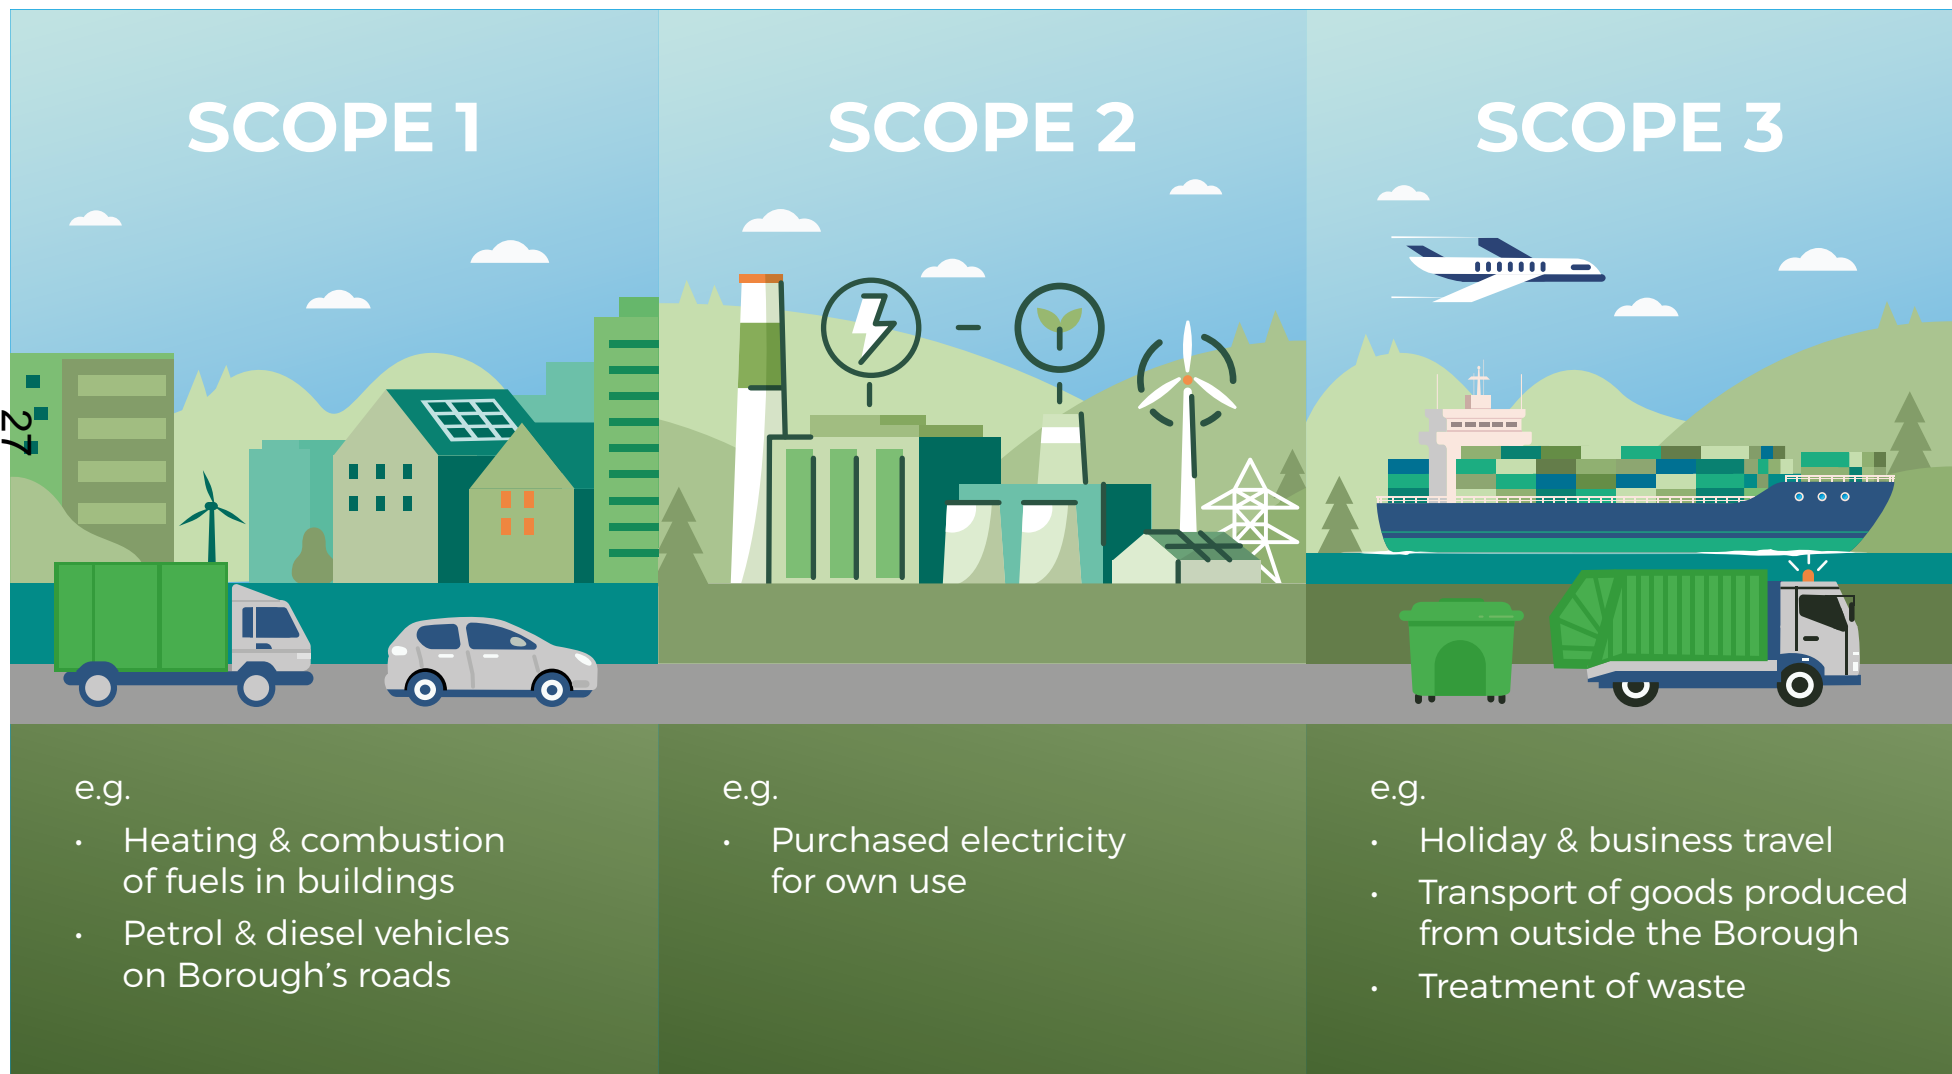

for information on SCATTER please refer to Appendix 2

government targets to increase the renewable energy infrastructure nationally and technological advances leading to greater energy efficiency.

This represents a 66 ktCO<sub>2</sub>e saving by 2030, as shown as the “BAU” line. Actions in the plan are estimated to save 206.7 ktCO<sub>2</sub>e, meaning a shortfall of 232 ktCO<sub>2</sub>e remains, as shown by the “With CEAP” line in figure 2 above. This clearly demonstrates the scale of the issue and outlines the importance of delivering the CEAP actions, alongside the need for wider government support, as without statutory powers and funding, the major actions required to reach the “Net Zero” line above are not currently achievable.

“Emissions are split into 3 different “scopes”. Examples of emission sources for each scope are shown in **Figure 3** below

### Scope 1:

Emissions associated with combustion of fuels directly by a consumer. Within Wokingham this mainly refers to gas use for heating, cooking and hot water or directly used in industry, and petrol/diesel used by vehicles whilst they are on the Borough's roads, again either for domestic or commercial purposes.

### Scope 2:

Energy which is purchased from elsewhere but used by a consumer. Within Wokingham this means the electricity used in the borough. The emissions are created at power stations located outside of Wokingham, but the electricity is used within the borough supplied via the electricity grid.

### Scope 3:

Emissions resulting from the behaviour and activity of a consumer but occurring from sources outside of their control. Within Wokingham these are generally consumption-based emissions, which, from a carbon accounting perspective, are out of the scope of the Borough's carbon footprint as they occur outside the boroughs boundary. Indeed all other emissions that occur outside the Borough boundary, as a result of activities taking place within the Borough boundary, fall into the category of scope 3 emissions. For example, the production and transport of goods from other countries, residential waste being treated outside of the Borough, as well as with distribution losses and emissions from water supply and treatment. It may also include investments made by stakeholders within the borough in external locations.

## OUR 10 PRIORITY AREAS AND CARBON SAVINGS

The CEAP establishes targets to achieve carbon dioxide reductions in 10 priority areas. These are: **Transport, Renewable Energy Generation, Building Retrofitting, Carbon Sequestration, Schools, Waste & Recycling, New Developments, Procurement, Engagement, Council specific actions.**

The Council has identified actions to reduce the carbon emissions for each priority area. Due to emissions coming from all sources, many of the CEAP actions rely on each other and cannot be done in isolation, meaning the majority of projects are running simultaneously. Within the CEAP, Short term actions would be completed within a few years (2023-2024), Medium term actions take several years to reach fulfilment (2025 to 2027), and Long term actions take many years to come to fruition (2028 to 2030).

The Emission targets within this document are best estimates based on the information we currently have, and the carbon accounting methodology is subject to ongoing refinement. For simplicity, the savings figures are rounded down to the nearest whole number. Where possible, targets are

aligned with government ones in terms of measurements, though stretched to be more ambitious than the 2050 Government goal. Not all carbon savings for all the projects listed in this plan have been calculated, as some of the information needed for this calculation is not yet available. As projects develop, we will be able to give more information on carbon savings per individual actions.

Estimated costs are provided for projects where feasibility studies have been completed and will be updated when possible for remaining work. The council will aim to benefit from low-carbon revenue streams and will be constantly seeking opportunities to work with the Government and private sector on joint projects, crowdfunding, grants and loans.

The council recognises the importance of the United Nations' Sustainable Development Goals (SDGs) and so the CEAP is aligned to the SDG framework. In doing so, the council hopes to ensure that its actions contribute to global level action and lead to a socially just response.

The council is constantly seeking to ensure the accuracy and quality of the information in the CEAP, and that our response to climate change is as robust as it can be. Actions within this plan are continually revisited to adjust or re-evaluate in line with actual progress, new policies, and global events that might affect the climate emergency agenda. To ensure we monitor progress against our 2030 target, a RAG rating system is in place. Each action has been assigned a colour based on the **standard RAG system, where green represents being on track to being achieved, amber indicates currently being slightly delayed, red indicates being significantly delayed.**

This plan is externally and independently reviewed by the council climate scorecards and the Carbon Disclosure Project (CDP), an internationally accepted process used by many large cities and companies. In order to scrutinise the Action Plan, a specific Climate Emergency Overview and Scrutiny Management Committee is in place, which meets every other month. This panel includes representatives from all major council parties

and gives residents the opportunity to submit questions and scrutinise the climate-related work of the Council. The aim of the Committee is to identify opportunities for improvements within the CEAP reporting, to ensure the highest level of transparency, and to provide strategic input on the whole CEAP and the Council's climate projects, ensuring these are supported by SMART targets.

The table in the next page is a summary of our Climate Emergency Action Plan for the 10 priorities. Each priority area is presented in more detail later in this document. The carbon savings outlined by each target represent the cumulative annual savings, towards net zero, ie they will contribute that amount of savings against the total emissions from the borough in 2030. Some of these targets will not directly represent carbon savings but are essential to the delivery of other targets; these are identified as 'Neutral'.

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>1. TRANSPORT</b>	
1A 50% Reduction in ICE private car mileage	
33% From EVs Registration	<b>44,957</b>
5% From Reduced Travel	<b>6,812</b>
2% From Public Transport Increase	<b>2,725</b>
10% From Active Transport Increase	<b>13,623</b>
1B 22% Reduction in Road Freight	<b>23,241</b>
1C Local Transport Plan 4	<b>Included in total</b>
<b>Subtotal</b>	<b>91,358</b>

31

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>2. RENEWABLE ENERGY GENERATION</b>	
2.1 Increase the generation of renewable energy through investment in solar farms to generate 49,000 MWh	<b>12,524</b>
2.2 Support the generation of renewable energy in the Borough to generate the equivalent of approx. 1550 kWh per household	<b>27,333</b>
<b>Subtotal</b>	<b>39,857</b>

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>3. RETROFITTING DOMESTIC AND COMMERCIAL BUILDINGS</b>	
3.1 Implement a PassiveHaus housing scheme for 249 Council homes	<b>914</b>
3.2 Improve energy performance of Council Housing stock	<b>3,229</b>
3.3 All local schools to be retrofitted by 2029	<b>5,034</b>
3.4 75% of homes to be EPC C rated or above	<b>55,490</b>
<b>Subtotal</b>	<b>66,667</b>

32

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>4. CARBON SEQUESTRATION</b>	
4.1 Cover 170 hectares with new trees in the form of woodlands, hedgerows and orchards	<b>2,329</b>
4.2 Improve carbon sequestration in future land management decisions	<b>2,031</b>
4.3 Implement a programme carbon sequestration opportunities	<b>Included in total</b>
4.4 Implement a climate change adaptation programme for the Council and Borough	<b>Neutral</b>
<b>Subtotal</b>	<b>4,360</b>

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>5. SCHOOLS AND YOUNG PEOPLE</b>	
5.1 Encourage and support school children in the Borough to take an active role in reducing carbon emissions	<b>Neutral</b>

<b>6. WASTE &amp; RECYCLING</b>	(Out of Scope)
6.1 Achieve 70% recycling target	<b>23,011</b>
6.2 Achieve 3% of waste going to landfill	<b>7,537</b>
<b>Subtotal</b>	<b>30,548</b>

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>7. NEW DEVELOPMENT</b>	
7.1 Major residential development to be designed and built to achieve zero carbon by the end of 2025	<b>Neutral</b>
7.2 Major non-residential development to be designed and built to achieve BREEAM excellent standard by 2025	<b>Neutral</b>
7.3 Establish a spatial strategy and design framework which promotes active and sustainable travel, sustainable design and construction, and enable biodiversity gains.	<b>Neutral</b>
7.4 Support low carbon and renewable energy generation	<b>Neutral</b>
7.5 All new residential and non-residential buildings to be designed and built to be EV ready by 2025	<b>Neutral</b>
7.6 100% of Council new development is built to carbon neutral standards from 2021	<b>Neutral</b>
<b>Subtotal</b>	<b>Neutral</b>

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>8. PROCUREMENT</b>	
8.1 Achieve sustainable procurement practices throughout the Council as part of corporate procurement strategy by 2022	<b>Neutral</b>
8.2 The Council will consider social value including carbon neutrality in all its procurement cycles by 2023	<b>Neutral</b>

34

<b>9. ENGAGEMENT AND BEHAVIOUR CHANGE</b>	
9.1 Raise awareness in the community about climate emergency agenda	<b>Neutral</b>
<b>Subtotal</b>	<b>Neutral</b>

Priority area	Carbon Savings (tCO <sub>2</sub> e)
<b>10. COUNCIL SPECIFIC ACTIONS</b>	
10.1 Reduce by 70% CO <sub>2</sub> e emissions produced by Council travel by 2030	<b>Included in travel emissions</b>
10.2 Council car fleet to become entirely ultra-low emission by 2028	<b>45.39</b>
10.3 All Council CCS buildings will be retrofitted to carbon neutral standards by 2030	<b>6,612</b>
<b>Subtotal</b>	<b>6,657</b>

# 1. TRANSPORT

# 1. TRANSPORT

## Annual Carbon Savings: 91,358 tCO<sub>2</sub>e

Being one of the key contributors towards our emissions, and with higher-than-average car ownership in the borough, transport saving is a priority area.

Targets here are based around the vital overall goal of reducing ICE (internal combustion engine) mileage, both for private and commercial purposes. They are therefore split under these 2 primary areas, with the sub targets all contributing towards the main goals by a percentage.

Key aims around Transport include encouraging and supporting residents and businesses to transition to sustainable and active methods. Active transport targets are currently ahead of the target estimation. Public transport and travel reductions are currently behind, with negative covid influences still remaining around public transport, meaning the carbon savings have been limited, and more actions or expansion of the current actions will be required in the future, to reduce Transport emissions. More focus is also recognised to be required around train usage, with work underway to include targets on this area in future progress reports.

The scale of Transport projects require significant external funding to implement, with a number of bids submitted this year alone.

Transport targets do not exist in isolation, with many reliant on others to reach their full potential and hence all projects are being progressed simultaneously. For example, active travel increases will require supporting infrastructure. Working with partners will be key to this, such as bus and rail companies or EV infrastructure providers, to maximise the benefits for all parties.

## Key Achievements this year:

- 94 chargers have been installed under the “on street charging scheme”, with an additional 42 to come.
- North Arborfield SDL Bus Strategy Published.
- 2109 children trained across the 3 levels of bikeability.
- Love to Ride Audit completed, with 122 active companies and 2530 participants.
- 2 council owned cargo bikes are being loaned out to businesses and 1 is being used internally.

## Action Changes from last year:

- 1A.4.11 merged into 1A.4.10.
- 1A.4.9 incorporated into 1A.4.5 as part of wider LCWIP related changes to increase walking and cycling.
- New Action 1C for LTP4 which incorporates multiple strategies.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>T1A. 50% Reduction in ICE private car mileage</b>			<b>68,117 tCO<sub>2</sub>e</b>	<b>TBC</b>	
<b>1A.1 33% From EV Registration</b>			<b>44,957 tCO<sub>2</sub>e</b>	<b>TBC</b>	
<p><b>37</b></p> <p><b>1A.1.1 To develop an EV strategy for Wokingham Borough.</b></p> <p>Borough wide strategy to specify the infrastructure for EV charging point to encourage the uptake of EVs.</p>	<ol style="list-style-type: none"> <li>1. Carry out an initial mapping assessment of the EV requirements and existing chargers for the Borough.</li> <li>2. Obtain a baseline on current electric vehicle market, current ownership, forecast growth and charging infrastructure technologically.</li> <li>3. Assess the potential for an integrated network of EV charge points. This would include encouraging the installation of EV charging points at motorway service areas and at large fuel retailers.</li> <li>4. Create a business case for funding.</li> <li>5. Develop and agree policy for EV charge point provision, which will maximise uptake of EV. Including policy, processes and protocol for responding to requests for charge points and how they can be operated and maintained.</li> <li>6. Agreeing partnerships, income streams and service providers to ensure best uptake.</li> <li>7. Produce EV strategy report and present to senior leadership teams for approval.</li> </ol>	<p>The consultant has sent over their report. This will be finalised by officers internally regarding targets and projections.</p>	<p>Included in total</p>	<p>Short term (2023/24)</p> <p>£32,000</p>	

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>1A.1.2 Provide a uniform method of accessing public and private charge points</b></p> <p>To deliver a back office so that EV chargers are accessible and easy to use to encourage more people to use them, along with providing accurate standardised public information on how to locate, use and pay for chargers in the Borough.</p>	<ol style="list-style-type: none"> <li>Investigate the types of back office payment systems used by the industry and assess the best option to be implemented at WBC.</li> <li>Harmonise EV related contracts such as electricity, maintenance, service and back office.</li> <li>Develop software for council to use when designing new projects and need this information.</li> <li>Monitor power usage to ensure reliability.</li> </ol>	<p>Action completed. Documents available which provide this information (EV Charger selection guide and Highways Annex E). Access requires contacting the EV team for permission and a quick guide. This is needed rather than a public standalone document as it is updated regularly. Being standardised to VENDelectric.</p>	<p>Included in total</p>	<p>Short term (2023/24)</p> <p>Nil</p>	<p></p>
<p><b>1A.1.3 Review the residential charge point infrastructure for those who have communal parking facilities such as flatted developments.</b></p> <p>Currently, 27% residential buildings (approximately 12,000 households) do not have off-street parking and therefore direct access to safely charging an EV vehicle. This represents a barrier for these occupants to own an EV and so reduces the uptake of EVs in the Borough.</p>	<ol style="list-style-type: none"> <li>Implement a pilot of EV charging points in selected location, aim at installing 19 new charging points for residents with communal parking facilities.</li> <li>Based on the experience gained during stage 1, the council will seek to extend charging point facilities across the Borough dependent on government funding phases being announced.</li> </ol>	<p>94 chargers have been installed under the on street charging scheme, with an additional 42 to come. These are all part of the same and to be delivered this year (2024).</p>	<p>785 tCO<sub>2</sub>e</p>	<p>Long term (2028/30)</p> <p>£173,500</p>	<p></p>

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>1A.1.4 Ensure that all EV charging points installed in the Borough are 'smart ready' to balance the electricity load demands on the grid.</b></p> <p>This will ensure reliability of power supply in the system. Maintaining confidence in the network and increasing the uptake of EVs. Overall carbon savings cannot be achieved without this.</p>	<ol style="list-style-type: none"> <li>1. Identification of dynamic load balancing or local storage systems that could be implemented in WBC.</li> <li>2. Engage with service providers about generic support for WBC EV chargers through standards such as OCCP.</li> <li>3. Analysis on current EV provisions and process in place.</li> <li>4. Assessing the potential implementation of fast charging at a premium rate to assist load balancing.</li> <li>5. Establish the parameters for the management of available energy in an area through methods like dynamic load balancing or local storage systems.</li> <li>6. Ensure that charge points are smart ready by setting requirements prohibiting installation of charge points unless they meet certain load management specifications.</li> </ol>	<p>Action completed for existing chargers. Some sites have limited capacity so load balancing for multiple charging sessions are planned to be implemented in the coming years.</p>	<p>Included in total</p>	<p>Ongoing (2025/28)</p> <p>Nil</p>	<p style="background-color: #76b82a; color: white; text-align: center; padding: 10px;">RAG</p>

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>1A.1.5 Support local businesses, including commercial property owners, to transition their commercial fleets to EV. Also to encourage employees to switch to EV for private use.</b></p>	<ol style="list-style-type: none"> <li>1. Consult with local businesses to understand needs, including taxi fleets, to develop the required charging infrastructure to support the uptake of EVs.</li> <li>2. Engage local business with Workplace Charging Scheme.</li> <li>3. Provide information on salary sacrifice schemes to support employees to transition to EV.</li> <li>4. Assess opportunities to support the development of plug-in taxi programs within the Borough, considering the requirements for charge points.</li> <li>5. Promote the benefits of EVs and electric transport overall through the climate conversation series and newsletters. This includes providing advice on applying for grants and funding for purchase and installation cost, etc.</li> <li>6. Aiming for the transition of 20% vehicles used for commercial purposes to ultra-low or electric.</li> </ol>	<p>The workplace charging scheme will need to be added to the EV Strategy. One scheme has been done via a commercial tenant request, with the potential for more of these in future.</p> <p>A few businesses have also been contacted specifically following low carbon workspace grants and the benefits and viability of EVs highlighted.</p>	<p>1,834 tCO<sub>2</sub>e</p>	<p>Medium term (2025/27)</p> <p>Nil</p>	<p style="background-color: #76b82a; color: white; text-align: center;">RAG</p>

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>1A.1.6 Promote uptake of EVs with our residents through engagement</b></p> <p>As 60% of residential buildings have parking facilities, we can support and educate our residents about the benefits of transitioning to EVs.</p>	<ol style="list-style-type: none"> <li>1. Deliver a sustained campaign to inspire residents to 'Go Ultra Low' and transition to EVs, making available information that will support this decision, including government schemes that will support residents in the installation of EV charging points.</li> </ol>	Not started	Included in total	Long term (2028/30) Nil	
<p><b>→ 1A.1.7 Coordinate the installation of EV charging points into both council buildings and private or commercially owned land, in line with the EV network plan approved in the strategy.</b></p> <p>EV network plan will have standardised EV charging point requirements to make charging easy to access.</p>	<ol style="list-style-type: none"> <li>1. Explore potential locations for charging points, including commercial property such as business parks, shopping centres, etc.</li> <li>2. Align the EVs installation requirements to the building retrofitting programs.</li> <li>3. Potential pilot with flow-bird where they can pay for parking and charging at the same time. Requires integration into ticketing machine infrastructure with single operator rather than different back offices.</li> <li>4. Targets for charger installation will be included in the EV Strategy.</li> <li>5. Ensure all council-owned assets comply with the standard. This includes locations such as libraries, leisure centres, parks, etc.</li> </ol>	<p>EV standards from highways design guide is being used.</p> <p>Ongoing process of exploring new options for charging points.</p> <p>Checklist developed to help project managers identify needs and types of chargers based on needs of users and other restrictions.</p> <p>112 active sockets installed, with a further 77 planned, totalling 1091 tCO<sub>2</sub>e identified.</p>	Included in total	Medium term (2025/27) Costs TBC	

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>1A.2 5% From Reduced Travel (Removing Journeys)</b>			<b>6,811 tCO<sub>2</sub>e</b>	<b>TBC</b>	
<p><b>1A.2.1 Engage businesses to promote home and remote working when possible.</b></p> <p>Capitalise on the unintended consequences of the national lockdown by engaging with businesses to understand their working practices and encourage them to consider the new ways of working in their recovery plans.</p>	<ol style="list-style-type: none"> <li>Engage businesses through a survey to assess their working practices during the national lockdown and encourage new ways of working as part of their recovery plans.</li> <li>Deliver a communications campaign to encourage local business to learn from COVID-19 unintended consequences.</li> <li>Reduce the CO2 emissions caused by travel from workers of local businesses by 30%.</li> </ol>	<p>Economic Development are commissioning a homeworking study this summer to understand the needs of homeworking for the Borough's businesses.</p>	4,183 tCO <sub>2</sub> e	<p>Short term (2023/24)</p> <p>Nil</p>

## 2. RENEWABLE ENERGY GENERATION

## 2. RENEWABLE ENERGY GENERATION

### Annual Carbon Savings: 26,420 tCO<sub>2</sub>e

Emissions from fossil fuel burning to supply electricity is a significant contributor to the borough's emissions, as the majority is provided via the national grid and hence emissions are calculated based on the current composition of energy providers.

By generating our own renewable energy through large schemes such as solar farms we can feed that back into the grid and reduce the overall requirement and composition of fossil fuel provision. This is how the carbon savings are calculated, by identifying how much MWh the renewable generation in our borough will reduce the need for such alternatives in the national grid system.

Smaller schemes installed directly by households, businesses and in some cases, whole communities, can also contribute to these savings more directly, supplying the power used by the property owners and hence reducing the overall demand on power from the fossil fuel dominated grid. Calculations for savings remain similar though, based on replacing electricity generation from burning fossil fuels with a no carbon alternative.

Renewable energy though relates to all forms not just solar, with this included in existing support schemes and further targets in future iterations to address these sections more directly. This includes the continued installation of renewable energy systems in public buildings.

Over the last year, Wokingham Borough Council has established the complex supporting planning and procurement necessary to deliver the significant projects that are intended to increase the generation of renewable energy across the Borough. The Council remains very much committed to the delivery of large scale ground mounted solar farms and will work with stakeholders as far as

practicable and possible to deliver those in a timely manner. Recent correspondence with SSEN and National Grid has brought into doubt the delivery of those projects before 2037, but WBC directors are meeting with those organisations in order to better understand the constraints and identify solutions to accelerate delivery to better align with both national and local targets. Following those meetings the council will need to assess further the implications for project delivery and carbon savings identified within the CEAP.

### Key Achievements this year:

- The generation of 27,113 MWh renewable electricity in the borough in the last recorded year (2021) saved the borough 5,722 tCO<sub>2</sub>e.
- Solar Together scheme planned for launch summer 2023, to support able-to-pay residents to install solar panels on their homes.
- Home Decarbonisation Advice scheme initiated through Parity Projects
- 1500 properties assisted over the last year under ECO3 scheme.

### Action Changes from last year:

- 2.2.2 has been split into 2.2.3 to separate between residents and businesses, with the initial 2.2.3 of smart energy incorporated into these or 3.4.5.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>2.1 Increase the generation of renewable energy through investment in solar farms to generate 49,000 MWh</b>			<b>10,342 tCO<sub>2</sub>e</b>	<b>£51.8M</b>	
<p><b>2.1.1 Deliver the installation of a solar farm in Barkham with the capacity to generate in excess of 29 MWp of energy.</b></p> <p>Installation of a large-scale solar farm on council owned land will allow the council to offset its carbon emissions from electricity and gas usage and possibly 'retail' any excess.</p> <p>New route for walkers, cyclists and horse-riders are being considered.</p>	<ol style="list-style-type: none"> <li>1. Asset review board to identify potential sites - consultant briefing for review of master planning of specific sites.</li> <li>2. Site feasibility, options appraisal and establishment of business case.</li> <li>3. Public consultation.</li> <li>4. Planning submission/approval.</li> <li>5. Grid connection application/agreement.</li> <li>6. Executive/Council approval of business case.</li> <li>7. Secure vacant possession - Site tenant one year notice</li> <li>8. Procurement of construction contractor, including framework and due diligence process.</li> <li>9. Solar Farm Construction.</li> <li>10. Large scale solar farm installed in Barkham with the potential of generating 29 MWp output achieving 28,563,000 kWh's per annum.</li> <li>11. Circa 10,000 new trees planted on the farmland.</li> </ol>	<p>Project has secured planning permission. Executive/Council has approved the business case and the main contractor has been appointed. Vacant possession of the site has been secured. Consultation processes with local residents is complete.</p> <p>The project had accepted a grid connection offer from SSEN of 2026 and was progressing on that basis for delivery between summer 2024 and 2026. Notwithstanding, in March 2023 the Council were informed that the connection date would now not be until 2037. At the time of writing, a director level meeting has been arranged between WBC, National Grid and SSEN to discuss the change in position and the possible solutions for accelerating delivery. Following that meeting the council will need to assess further the implications for project delivery and carbon savings.</p>	6,121 tCO <sub>2</sub> e	<p>Programme of delivery to be confirmed in due course.</p> <p>£26.8M</p>

### 3. RETROFITTING DOMESTIC AND COMMERCIAL BUILDINGS

### 3. RETROFITTING DOMESTIC AND COMMERCIAL BUILDINGS

#### Annual Carbon Savings: 64,033 tCO<sub>2</sub>e

While energy supply elements are primarily targeted above, reducing the demand for such, by retrofitting domestic and commercial buildings, is also vital in minimising overall energy emissions. The government also recognise this as a key area to address, so targets are aligned to such where possible, now being measured primarily via the EPC ratings of all properties.

Key measures include encouraging awareness of the potential energy saving measures available to domestic and commercial property owners, looking to support them throughout the process of identifying opportunities and installing them. By doing so, significant savings can be achieved in both energy bills and carbon emissions, particularly for buildings with currently low energy efficiency ratings.

In addition, the council are keen to work with local businesses to also improve commercial properties, to deliver similar benefits. This is again in line with government aspirations. This work will involve working with many partners, such the Energy Company Obligation (ECO) and Green Homes Grant schemes.

Social houses too are included in this section. Offices, leisure centres and libraries, and other Council owned buildings are included in the council section at the end of the CEAP instead, as this relates directly to council energy use.

#### Key Achievements this year:

- Building retrofitting works so far have cumulatively contributed towards savings of 741.89 tCO<sub>2</sub>e.
- Street lighting efficiency has contributed savings of 163 tCO<sub>2</sub>e.
- Over 1600 households getting assistance so far from Help to Heat.
- Gorse Ride PassivHaus site redesigned to be entirely no gas.
- A bid has been successful under the Social Housing Decarbonisation Fund to bring ~110 homes to an EPC C by 2025.
- A successful bid has been completed for the home upgrade grant 2.
- Local Authority Delivery (LAD) 2 scheme completed and LAD 3 upcoming.

#### Action Changes from last year:

- 3.4.4 - Home decarbonisation service part moved to 2.2.3 as it is about advice not delivering building retrofitting.
- Schools retrofitting targets moved into this specific building retrofitting section.

## 4. CARBON SEQUESTRATION

## 4. CARBON SEQUESTRATION

### Annual Carbon Savings: 4,360 tCO<sub>2</sub>e

Some emission sources will be nearly impossible to eliminate, hence some carbon sequestration will be required. This though will always be done as a final response, with emission minimisation being prioritised. In addition to minimise emissions, carbon sequestration projects offer considerable benefits to biodiversity and public health.

Key measures here revolve around land management, aiming to increase both the area utilised for sequestration and biodiversity through more trees and allotments, alongside maintaining or improving the quality of these areas, through better soil/grassland management. Through this approach trees are planted towards overall objectives through optimal schemes, be it as part of hedgerows, orchards or full woodlands. As trees take some time to reach their full maturity in terms of carbon sequestration and size, figures used are those for the final number of hectares that will be covered by any trees, hedgerows or orchard once fully grown.

2022 focused on groundwork with regards to the large-scale planting, to ensure the long-term sustainability of carbon sequestration projects, considered the essential maintenance and selection of the trees for each location. This will be supported by a Tree Strategy developed in 2023, which will help meet statutory biodiversity obligations, while maximising the wide range of benefits that trees and woods can deliver. Small scale and resident planting schemes within this wider work have already begun.

The council plans also include projects to manage grassland, rewild land, protect and enhance wetland habitats, promote native planting and target woodland creation, as well as retention and maintenance of existing trees.

Our partnership with the Woodland Trust will ensure we receive the advice and support needed to ensure that we will be able

to maximise the wide range of benefits that trees and woods can deliver. However, agricultural emissions remain a noticeable element of the boroughs overall profile, so alongside these goal, future iterations of the CEAP will incorporate targets to minimise these where possible by working alongside land owners to improve the efficiency of their operations.

### Key Achievements this year:

- Alongside hedgerows and land management, the 40,242 trees planted between Nov 2021 and March 2023 have contributed towards offsetting an estimated 6,036 tCO<sub>2</sub>e.
- Total of 4332 trees have been distributed to residents between November 2022 - March 2023 as part of the Garden Forest Scheme.
- Development of the Tree Strategy to help support improved management and maintenance of trees across the Borough.
- Local Nature Recovery Strategy in progress as a partnership as part of a Berkshire wide strategy.
- Trialling management of some sites by our countryside services team to help improve biodiversity net gain.

### Action Changes from last year:

- 4.1.1 and 4.1.2 clarified to be for large and small scale sites respectively.
- Action 4.4 added which covers the upcoming adaptation plan.

Action / Co - Benefits	Description / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>4.1 Cover 170 hectares with new trees in the form of woodlands, hedgerows and orchards</b>			<b>2,329 tCO<sub>2</sub>e</b>	<b>£2.215m</b>

# 5. SCHOOLS & YOUNG PEOPLE

## 5. SCHOOLS & YOUNG PEOPLE

### Annual Carbon Savings: Accounted for throughout the plan

With climate issues being a big focus globally and still growing, it is vital children learn about them. This will help deliver the skills they require to succeed in the upcoming green economy.

WBC recognises the next generation will be key to ensure the success and continuity of the CEAP due to the extended timescales of the associated impacts and solutions. Therefore, schools, teachers and young people themselves will be key partners for delivery of this Plan. Making the voices of young people heard should also encourage intergenerational learning meaning sustainable behaviour change is encouraged in their families.

Key measures here focus on engagement, awareness raising and education, passing across the same lessons we are trying to convey to wider residents and businesses, but in a more appropriate format. Doing so from an early age will ensure the environment is an automatic consideration throughout their future lives.

There are various environmentally focused initiatives, award schemes and accreditations which schools can work towards and many schools in the borough have achieved some of these awards. The council's aim is to make it as simple as possible to identify which scheme will work for them and what their pupils want to achieve, as well as supporting schools in their journey to becoming more sustainable or even net zero carbon.

Due to Covid-19 related restrictions in visiting schools over the last two years there has been less physical engagement with schools than planned. Despite this, the council has continued to build up contacts with schools and gain more experience of delivering these targets virtually which will be implemented in the updated action

plan below. Due to limitations with capacity a number of these actions remain on hold, though some continue to be delivered separately by other departments and the schools themselves.

Due to this being future savings and around embedding behaviours beyond the 2030 plan, these actions below are listed as neutral. However, carbon saving associated with the tree planting, building retrofitting and active travel work with schools is accounted for in the relevant sections.

### Key Achievements this year:

- Youth politics event held at the council chambers at Shute end in Feb.
- 12 schools actively engaged with ModeShift STARS.
- Multiple stalls for other sections included at the teachers summit.
- 33 Representatives now on the Youth Council.
- Climate Change specific GCSE Module introduced by government.

### Action Changes from last year:

- Building retrofitting action moved into the specific section 3.3.1.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>5.1 Encourage and support school children in the Borough to take an active role in reducing carbon emissions</b>			<b>Neutral</b>	<b>TBC</b>	
<b>5.1.1 Deliver annual climate emergency assemblies at local schools.</b>  Introduce discussions about Climate Emergency amongst children and young adults via an annual climate emergency assembly for all secondary school students.	1. Plan and deliver climate emergency assemblies with all secondary schools.	<p>This project is currently on hold due to limited resources.</p> <p>A teachers climate summit was held at Holme Grange schools in July 2022, WBC coordinated the organisation and delivery of the event. Representatives from 31 schools from across the Borough attended the Summit. This will be replicated in 2023.</p> <p>Representatives from WBC attended a mock COP27 event at Holme Grange school in November 2022 and addressed questions from the students.</p>	Neutral	Medium term (2025/27)  Nil

Deliver engagement campaigns to inspire children and school staff to adopt new, more sustainable behaviours.</li> </ol>	<p>This project is currently on hold due to limited resources.</p>	<p>Neutral</p>	<p>Short term (2023/24)</p> <p>Costs TBC</p>	

## 6. WASTE AND RECYCLING

## 6. WASTE AND RECYCLING

### Annual Carbon Savings: 30,548 tCO<sub>2</sub>e as of 2023 (Out of scope)

To reach net zero carbon it is vital to minimise the amount of waste produced, following the waste hierarchy. As such a reduction in overall waste is the primary goal of the Waste Strategy, followed by an increase in the percentage of total waste being recycled, to minimise the amount going to landfill or incineration. This means the potential savings by 2030 are reduced as they are instead saved by lowering the total waste produced, as reflected in the key achievements.

Key measures here include engaging with residents to encourage behaviour changes around waste minimisation and increase in recycling rate, along with providing the supporting infrastructure to do so.

The 70% recycling target is the overall goal of this section and so, similar to the transport section, this is how the overall saving is calculated and the other individual actions all contribute towards this.

The majority of waste which is not recycled is currently incinerated, to generate energy as this is a marginally more sustainable alternative to landfill. However, it is certainly not the aim and is used as a last resort. It is also recognised that some outlying/unusual materials such as asbestos will never be fully recyclable or used for incineration, so 0% of waste going to landfill cannot be realistically achieved, however we can get very close and have moved this target forward to reflect our ambition here.

Waste generation & recycling related carbon emissions are not included in the BEIS datasets and are out of scopes 1 and 2. Hence, the savings are not included in the overall totals, but demonstrate the potential savings from such measures and their continued importance overall.

### Key Achievements this year:

- Overall, this year's total waste decreased massively to 65,709 tonnes from 71,624, with a recycling rate of 53%. This meant a total of 80,758 tonnes of CO<sub>2</sub> savings in total and 1.15 tCO<sub>2</sub>e per household, a huge achievement. This is thanks to the below actions.
- Waste Strategy Proposal is progressing with support, having identified significant cost and carbon savings.
- One round of identification and targeted improvements for food waste completed.
- Talks are now being delivered at schools and with community groups about the importance of recycling, reducing and reusing waste.

### Action Changes from last year:

- Methodology and carbon savings updated to capture the latest and most accurate figures.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>6.1 Achieve 70% recycling target</b>			<b>23,011 tCO<sub>2</sub>e</b>	<b>TBC</b>	
<p><b>6.1.1 Implement a new waste and recycling collection system with improved facilities.</b></p> <p>Following consultation, a full Waste Strategy will be devised and implemented which will focus on waste minimisation, a high recycling rate, improved quality of recycling and reduced collection/disposal costs and reduced carbon emissions. It will deliver an improved system in general, facilitating this across all materials.</p>	<ol style="list-style-type: none"> <li>1. Prepare consultants briefing, Options appraisal in early 2021, Market research and Decision making by end of 2021.</li> <li>2. Devise and adopt the communications plan by 2022</li> <li>3. Development of the Waste Strategy throughout 2022.</li> <li>4. Communication with residents pre-delivery.</li> <li>5. Delivery of new waste collection methods by March 2026 (three month).</li> <li>6. Ongoing communication with residents post delivery.</li> <li>7. Assess impact of the new initiative on the property stock.</li> <li>8. The council operations are included in this target.</li> </ol>	<p>The Waste Strategy proposal which aligns waste collection with the government's stated objective of consistency, went to the Executive in March 2023 having been through scrutiny and public consultation. The improvements to the collection of waste are estimated to save £1m per year from the council's revenue budget as well as save CO<sub>2</sub>e through the increase in recycling that this brings as best practice demonstrates.</p> <p>Separation of contamination is ongoing.</p> <p>Council wise cardboard and cans are being recycled, along with separate food waste bins provided.</p>	2,415 tCO <sub>2</sub> e (Included in total)	Medium term (2025/27) £1.9m	

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>6.1.2 Improve residents' engagement with waste and recycling initiatives via partner Green Redeem.</b></p> <p>Weekly customer email to subscribers and monthly targeted campaigns to coincide with council's services and initiatives to increase the level of participation in recycling and improve the accuracy of recycling materials.</p> <p>Alongside greater awareness amongst residents about environmental issues.</p>	<ol style="list-style-type: none"> <li>Weekly email to prompt residents on presenting their waste / recycling.</li> <li>Waste reduction campaign by GreenRedeem.</li> <li>Climate Change Emergency campaigns.</li> <li>Promote and prompt residents to renew Garden Waste.</li> <li>Promote online bulky waste collection service.</li> </ol>	<p>This action has now ended, with numerous successful campaigns and communications having been run in this area including those on zero waste, community gardens, food waste, littering, repair cafes and soft plastics.</p> <p>As a part of wider engagement, the best methods for such will now be further investigated to identify the next steps for optimal effectiveness.</p>	<p>6,559 tCO<sub>2</sub>e</p> <p>(Included in total)</p>	<p>Short term (2023/24)</p> <p>£126,240</p> <p>(£31,560 per annum)</p>

# 7. NEW DEVELOPMENT

## 7. NEW DEVELOPMENT

### Annual Carbon Savings: Neutral as applies to future development.

With the need for new homes, including the level of need calculated through government planning policy, it is essential new homes are provided in a sustainable manner, which minimises the overall long-term cost of reaching net zero (with retrofit much more expensive). By using this information, combined with industry knowledge, and government policy, planning requirements are being established within actions in this section. These are preventative targets, with neutral savings against the 2030 goal.

The majority of the actions in this section are currently included within, or revolve around, the Local Plan Update process. This will review all existing planning policy and provide an opportunity to establish a new strategy to manage development locally as well as performance standards for all types of new development.

In 2022 the council responded to a consultation on the Future Home Standards to ensure the ability for Local Plans to set higher energy performance standards for all new homes and commercial properties. Through the Standards, the government has set out plans to improve the minimum energy performance of new homes, including low carbon heating and being zero carbon ready by 2025. These homes are expected to produce 75-80% lower carbon emissions compared to previous levels. Existing homes will also be encouraged to achieve higher standards, making homes warmer and reducing bills.

Building homes to net zero standards will result in massive savings compared to building standard homes. So while these actions are defined as neutral for the purposes of this plan, they demonstrate the significant scale of the benefits that can be achieved through their implementation.

Key challenges in this area will be convincing the government appointed Planning Inspector, who will examine any new planning policies, of the need for ambitious standards. Subsequently, the challenge will be to ensure developers achieve these standards due to the lack of government policy and regulation in this area. Therefore, engagement and cooperation with numerous parties is vital, including the council's Development Management and Delivery teams, Building Control assessors, developers, housing associations and the highways authority, as well as consulting with the local community and stakeholders.

### Key Achievements this year:

- Adoption of Climate Change Interim Policy Position Statement, December 2022.
- Production of evidence base to support the preparation of the Local Plan Update with consultant ARUP.
- London Road social housing has achieved SAP A, as has Groveland.

### Action Changes from last year:

- There are no new actions or change in this section.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>7.1 Towards the end of 2025, major residential development to be designed and built to achieve zero carbon.</b>			<b>Neutral</b>	<b>TBC</b>	
<p><b>7.1.1 Require major residential development to achieve zero carbon.</b></p> <p>Policy within the emerging Local Plan Update proposes to require residential developments of 10 or more dwellings to achieve zero carbon performance. A definition of what zero carbon means in this context will be provided.</p> <p>Where there is robust evidence that this cannot be achieved on site, as a last resort the Council proposes to accept appropriate financial contributions to provide carbon offsetting.</p>	<ol style="list-style-type: none"> <li>1. Prepare climate change evidence base to support of the Local Plan Update. This will be a key part of evidencing the requirements set out in the draft plan and will contribute towards the goals relating to new development in the CEAP.</li> <li>2. # 8. PROCUREMENT

## 8. PROCUREMENT

### Annual Carbon Savings: Neutral as applies to future procurement.

The Council recognises its ability to reduce its carbon emissions through its own procurement processes, utilising its scale, power and presence to establish requirements for a low-carbon economy.

This will be achieved by encouraging our chosen suppliers to improve their own sustainability measures, prioritising those who have done so where possible, through implementing policies which incorporate this as a requirement/criteria in overall decision making processes. Doing so will also set an example for others, demonstrating the viability of such actions and outlining our commitment to enacting them ourselves.

Engaging with and educating our large range of suppliers will be key to this goal, with many required due to the scale of our essential operations, whether through contracts to provide external services, supporting operations or supplying goods/services directly to council sites.

With a number of significant contracts and strategies set to expire or be reviewed before the 2030 goal, these opportunities will be utilised to review and improve the sustainability elements of these services.

Goals under this section also covers training staff on climate change and other methods through which climate change considerations can be embedded into the governance and decision making within the council. This is also done through a Climate Change Impact Assessment Tool which assists staff in identifying the potential impacts of projects and how they can potentially mitigate these.

Carbon savings here are neutral as they apply to future procurement or are captured in other existing actions. Also, with global aspects increasingly impacting worldwide supply chains, WBC recognises the significance of social value and will be prioritising it within these procurement targets.

### Key Achievements this year:

- Carbon reduction plan and emissions reporting required for substantial contracts.
- Assessment of suppliers complete to inform a future full scope 3 emissions review.
- Actions aligned with existing procurement changes to improve deliverability

### Action Changes from last year:

- There are no new actions or change in this section.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>8.1 By 2024, achieve sustainable procurement practice throughout the council as part of Corporate Procurement Strategy</b>			Neutral	Nil

<b>8.2 By 2024, the council will consider social value, including carbon neutrality, in all its procurement cycles</b>			<b>Neutral</b>	<b>Nil</b>	
<b>8.2.1 Adopt a WBC Social Value Policy</b>  Generation of a WBC Social Value policy, linking to corporate procurement strategy	1. Draft the WBC Social Value policy. 2. Consult with businesses and SLT. 3. Implement communication of policy via CEM.	Not Started	Neutral	Medium term (2025/27)  Nil	
121 <b>8.2.2 Promote local skills and employment</b>  Where appropriate, locally-based suppliers will be used for all direct award and quotation processes, leading to reduce carbon impact from logistics and travel where compliant.	1. All buyers / commissioners to impose SME/local supply targets on suppliers including reporting back of SME/local supplier subcontracting and carbon reduction. 2. Improve Skills for low carbon transition, including supporting those in traditional 'high carbon industries to retrain. 3. Performance Team name the top 20 suppliers supporting scheme.	Not Started	Neutral	Medium term (2025/27)  Nil	

# 9. ENGAGEMENT AND BEHAVIOUR CHANGE

## 9. ENGAGEMENT AND BEHAVIOUR CHANGE

### Annual Carbon Savings: Neutral as per below

WBC recognises it cannot reach the ambitious 2030 goal alone, with many of the actions throughout the plan requiring support from external and internal stakeholders including Council staff, residents, businesses, schools, Town and Parish Councils community organisations in shifting to more sustainable behaviours and uptake low-carbon technologies.

This section outlines some of these specific measures which will support this process, focusing on promoting and accelerating the shift by raising awareness of the existing climate impacts that the Council and Borough are experiencing, along with providing examples and opportunities for change.

The carbon savings here will feed into carbon savings achieved elsewhere in the CEAP. The majority of the actions are therefore listed as 'Neutral' for their carbon savings against the 2030 target.

This section also covers business engagement. The government's Build Back Better strategy will enable more policy and mean more opportunities will become available for businesses at a local level, particularly in promoting the green sector. Both of these opportunities will be incorporated into the upcoming Climate Emergency Communication and Engagement Plan. The intention is to develop and implement an engagement plan that is specifically targeted towards tackling the climate emergency and will dictate the actions within this section of the plan going forward.

### Key Achievements this year:

- Let's Talk Climate deliberative process involved 60 community representatives in peer group sessions and surveyed 140 residents to gather recommendations around our climate work and vision.
- Online Planet Pledge campaign launched in Feb 2023 to inspire and encourage people to make a solemn promise to make a small change over the year to help address the climate emergency. 55 pledges have been received so far.
- The climate emergency newsletter continues to be successful, with over 6,000 subscribers.
- A Net Zero Heroes team of volunteer staff within the council has been formed. The aim of which is to meet regularly to discuss, communicate and engage with all staff in the organisation on how to reduce their carbon footprint.
- Active travel, LTP, cost of living and other major projects have all been incorporated into comms plan already and will continue to expand this, including a campaign around the upcoming COP28.

### Action changes from last year:

- There are no new actions in this section.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>9.1 Raise awareness in the community about the climate emergency agenda</b>			<b>Neutral</b>	<b>TBC</b>	
<p><b>9.1.1. Implement a Wokingham Borough Council Climate Emergency Communication and Engagement Plan.</b></p> <p>Ensure there is a long-term plan for the delivery of sustained communication with all stakeholders in the borough needed to tackle the climate emergency, including residents, businesses, young people, council staff and the Town and Parish Councils.</p>	<ol style="list-style-type: none"> <li>Options appraisal to inform on different engagement methods.</li> <li>Complete a visioning project (Let's Talk Climate) to allow for residents, businesses, community organisations and young people to envisage how a net zero carbon borough will look in 2030.</li> <li>Investigate behaviour change barriers.</li> <li>Develop a programme available for residents to shift to more sustainable choices and be rewarded for forming these new habits.</li> <li>Draft the Climate Emergency Engagement Plan. This includes completion of an Equality Impact Assessment to measure the potential impacts on all members of the community.</li> <li>Support Town and Parish councils and other key stakeholders to share best practice and lessons learned to set out a path to net zero carbon in their own operations, where possible.</li> </ol>	<p>Deliberative process titled "Let's Talk Climate" completed in 2022. This included a number of peer group sessions with a range of stakeholders from across the Borough and an e-survey for residents. Results and recommendations from these are now incorporated in this CEAP progress report.</p> <p>The results from Let's Talk Climate will feed into the upcoming Climate Emergency Communication and Engagement Plan, that will be developed in 2023/24.</p>	Neutral	<p>Short term (2023/24)</p> <p>£33,000</p>

# 10. COUNCIL SPECIFIC ACTIONS

## 10. COUNCIL SPECIFIC ACTIONS

### Annual Carbon Savings: 11,810 tCO<sub>2</sub>e

The council aims to lead the way on carbon neutrality, by improving its own operations, to become a net zero carbon organisation by 2030. To do so a number of key areas have been identified to target high emission activities.

Currently the council emits approximately 7.6 ktCO<sub>2</sub>e, which represents only 1.69% of the boroughs total. From the below summary the 3 main areas of council emissions are Energy, Transport and Waste, though the latter remains out of scope for the CEAP emission reporting itself. As such these are the key areas the actions in this section focus on, with the carbon savings for 10.1 not counted for in the above travel table and figures. The exceptions are actions 10.2 and 10.3, which is regarding the council fleet and buildings specifically in addition to above metrics and so is noted separately here.

The council also has an internal team of officers from all across the council, who are interested in driving sustainable shifts in the council, through behaviour change and workplace practice change. This group – Net Zero Heroes – is volunteering their time to gather regularly and assessing progress in this area, providing new ideas on potential improvements in sustainability for internal practices. These projects and ideas, which often also help staff minimise their impact at home too, are included in regular internal communication.

### Key Achievements this year:

- Feasibility study underway with Energy Savings Trust (EST) to assess and deliver cost and carbon savings around council fleet vehicles and grey mileage.
- Assessment of salary sacrifice schemes underway as part of wider council transition to EV plan.
- Feasibility study underway for a Liftshare scheme to analyse employee commuting patterns and car-share or active/sustainable travel opportunities.

### Action changes from last year:

- There are no new actions in this section.

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>10.1 Leading by example - Reduce by 70% CO<sub>2</sub>e emissions produced by council related travel by 2030</b>			<b>892 tCO<sub>2</sub>e</b>	<b>TBC</b>	
<p><b>10.1.1 Deliver a strategy to reduce miles produced by council staff work related travel.</b></p> <p>To investigate the possibility to introduce EV Car clubs for council staff between Monday to Friday and with the option to open to the public during the weekends.</p>	<ol style="list-style-type: none"> <li>1. Carry out assessment for car clubs and produce a strategy</li> <li>2. Analyse saving from Mileage paid to staff vs cost paid to provider</li> <li>3. Aiming to reduce grey fleet miles by 30% from transport related trips.</li> </ol>	<p>Feasibility study underway with Energy Savings Trust (EST) to assess council fleet vehicles and grey miles.</p>	<p>78.31 tCO<sub>2</sub>e (Included in total)</p>	<p>Medium term (2025/27)  Costs TBC  Nil from strategy itself</p>	
<p><b>10.1.2 Promote homeworking and remote working practices amongst council staff.</b></p> <p>In addition to home working, expand remote working practices in other locations to reduce unnecessary travel and the need for central office accommodation.</p>	<ol style="list-style-type: none"> <li>1. Capitalise on the unintended consequences of the national lockdown by reviewing working from home practices in the council and consider new ways of working in the recovery plan for the council.</li> <li>2. Deliver a staff survey to assess working from home preferences amongst council staff.</li> <li>3. Aiming to reduce the CO<sub>2</sub> emissions travelled from council staff to work by 40% by 2022.</li> </ol>	<p>Managers have discussed the need for and preferences of home or flexible working patterns with staff, completing the staff surveys.</p> <p>Only those staff required will be coming into the office at this stage.</p> <p>The workplace reimaged survey is complete and will likely support this further.</p>	<p>405.42 tCO<sub>2</sub>e (Included in total)</p>	<p>Short term (2023/24)  Nil</p>	

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>10.1.3 Incentivise council staff to mode shift to active and sustainable transport or EVs.</b></p> <p>Investigate incentives that can be given to council staff to support their commute to work being more sustainable by implementing schemes that make such methods more accessible.</p>	<ol style="list-style-type: none"> <li>1. Carry out an assessment of viability of salary sacrifice schemes that could be offered to council employees for sustainable transport or Evs.</li> <li>2. Assess alternative transport options for council staff.</li> <li>3. Communicate these options and advice to relevant staff on how to reduce their commuting emissions.</li> <li>4. Aiming to reduce the CO2 emissions from staff travelling to work by 10% by 2025.</li> </ol>	<p>Assessment of salary sacrifice schemes underway as part of wider council transition to EV plan.</p> <p>Feasibility study underway for a Liftshare scheme to analyse employee commuting patterns and car-share or active/sustainable travel opportunities.</p>	<p>304.06 tCO<sub>2</sub>e (Included in total)</p>	<p>Medium term (2025/27) £10,000</p>	
<p><b>10.2 Council's car fleet becomes entirely ultra-low emission by 2028</b></p>			<p><b>11,810 tCO<sub>2</sub>e</b></p>	<p><b>TBC</b></p>	
<p><b>10.2.1 Ensuring 100% of the car fleet operated by the council is ultra-low emission by 2028</b></p> <p>Leading the way by transitioning the 16 WBC owned and leased vehicles to EV or low carbon vehicles at the end of their leasing contract/ life. Vehicles range from minibuses, cars and a tractor in Dinton Pastures.</p>	<ol style="list-style-type: none"> <li>1. Deliver the programme to transition WBC owned vehicles to be ultra-low vehicles by 2028.</li> <li>2. Review lease contracts and establish a programme for transitioning leased vehicles to EV when engaging in new contracts.</li> <li>3. Embed requirements for EV's or Low Emission vehicles in WBC Fleet Guidelines Policy and WBC Vehicle Procurement Guidelines.</li> <li>4. Update the Vehicle Procurement Application form to include the consideration of EV's or Low Emission vehicles as a standard with no sign off from the Board for any vehicle that does not meeting this requirement.</li> </ol>	<p>Feasibility study underway with Energy Savings Trust (EST) to assess council fleet vehicles and grey miles, and options to transition 100% of our car fleet to ultra-low emission vehicles by 2028.</p>	<p>45.39 tCO<sub>2</sub>e</p>	<p>Medium term (2025/27) Costs TBC</p>	

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<p><b>10.2.2 All council run operations, including through partners, to utilise EV or ultra-low emissions vehicles.</b></p> <p>Ensuring all our contractors use ultra-low or EV when possible will reduce emissions from contractors and suppliers vehicles working for and in partnership with the council. This includes Education and Social Care transport providers to encourage/specify transition to ultra-low vehicles for use on HTST transport.</p>	<ol style="list-style-type: none"> <li>1. Include in procurement policies considerations for EV/ultra-low emission vehicles as a standard.</li> <li>2. All buyers/commissioners to apply contractual policies when subcontracting services</li> <li>3. Review the contracts with our transport providers and establish requirements to transition to ultra-low emissions vehicles</li> <li>4. Optimise HTST routes to reduce mileage</li> <li>5. 50% (which exceeds the statutory minimum of 35%) contract transport fleet will be hybrid or fully electric by 2028.</li> </ol>	<p>To be incorporated into EV strategy such that consideration must be made for climate issues, including EV, as part of the procurement process for projects.</p>	<p>Included in total</p>	<p>Long term (2028/30) Costs TBC</p>	<p style="background-color: red; color: white; text-align: center;">RAG</p>

Action / Description	Milestones / Outcome	Current Status	Carbon Savings	Timescale / Total Cost	RAG
<b>10.3 By 2030 All council owned buildings will be retrofitted to carbon neutral standards.</b>			<b>11,765 tCO<sub>2</sub>e</b>	<b>TBC</b>	
<p><b>10.3.1 Improve energy performance of council owned buildings to carbon neutral standards, excluding schools as this is a separate action.</b></p> <p>Implement a wide range of energy efficiency projects at existing properties to improve energy efficiency. These include, installing LED lighting, Cavity Wall, loft insulation etc., all to make the property 'consume' less energy.</p> <p>Programme for retrofitting corporate assets based on energy performance baseline and energy improvement requirements.</p>	<ol style="list-style-type: none"> <li>1. Establish baseline energy performance for each council-owned asset.</li> <li>2. Three year assessment, average kilowatt value (FY from 2017-20).</li> <li>3. Develop Energy Management Plan.</li> <li>4. Identify energy performance improvement requirements to all corporate sites and recorded in the Corporate Assets Carbon Reduction Database.</li> <li>5. Programme for asset retrofit set up</li> <li>6. Feasibility assessment on Woodley Library as a pilot project.</li> <li>7. Establish guidelines of energy improvements that can be used for all corporate assets.</li> <li>8. Deliver the building retrofitting programme.</li> </ol>	<p>Baseline and carbon reduction plan under development, while we continue to deliver improvements, with an average of 30 properties undergoing development each year to improve energy efficiency and renewables generation.</p>	11,765 tCO <sub>2</sub> e	<p>Medium term (2025/27)</p> <p>£13.5M (£4.5M per year)</p>	

133

# COUNCIL EMISSIONS 2022/2023

134

## COUNCIL ACTIONS AND EMISSIONS 2022/2023

In addition to these specific actions, the council monitors its gross emissions within the borough total to measure progress to become carbon neutral. This is done through the Local Authority GHG Accounting Tool, which applies standard emissions factors to usage figures and is designed specifically for local authorities.

This currently applies to scope 1+2 emissions where the council has direct accountability and can have the most impact through solutions, though scope 3 elements are also taken into account where it is possible for the council to utilise its influence. Going forward, as an organisation we will begin measuring and targeting a reduction in scope 3 emissions. Within this tool the following scopes for emissions are defined for businesses/councils.

### Scope 1 and 2:

Direct emissions produced by sources which are owned or controlled by the council and include electricity use, burning oil or gas for heating, and fuel consumption from business travel or distribution. This therefore includes streetlighting for the council, though this is not a direct result of operations.

### Scope 3:

Indirect emissions produced by external factors but as a result of council operations and consumption. This includes elements such as staff commuting, contractors, waste production and working from home. Outsourced scope 3 emissions are not currently measured due to the large number of contractors that the Council works with.

Due to some irregularities in figures available with the time lag in reporting, some of the months have been estimated based on previous years, to find the best annual estimate for this period.

Scope	Emissions Type	Emission (tCO <sub>2</sub> e)	Percentage
<b>Scope 1</b>	Heating	5,668.51	45.3%
	Fugitive Emissions	0.00	0.0%
	Authority's Fleet	46.57	0.4%
<b>Scope 2</b>	Electricity	5,997.43	47.9%
<b>Scope 3</b>	Staff Business Travel	198.20	1.6%
	Outsourced Fleet	2.56	0.0%
	Transmission & Distribution Losses	530.59	4.2%
	Water	12.75	0.1%
	Material Use	0.00	0.0%
	Waste generated from own operations	66.31	0.5%
	Outsourced Scope 3	Not currently measured	Not currently measured
<b>Total Emissions Green Tariff Electricity Final Emissions</b>		12,522.93 (-) 4498.07 <b>8,024.86</b>	<b>100%</b>

## Emissions Summary:

A brief explanation on the sources of the emissions contributing to each of these areas is provided in the below analysis, along with the actions which have already been outlined regarding council operations specifically.

### Transport:

The vast majority of council staff are continuing to work from home where possible, and will continue to do so for the foreseeable future, thanks to the continued positive results achieved and the results from the internal “Workplace Reimagined” survey confirming optimal working patterns. This means this aspect is well ahead of target, leading to a drastic drop in transport emissions for the council. However, elements remain, primarily from the use of council owned or private vehicles for council work, representing a total of 244.78 tCO<sub>2</sub>e across all scopes. Staff commuting figures fall under outsourced scope 3.

This area is being targeted by the actions in the council emissions section.

## Waste:

In 2022/23 the council produced approximately 175 tonnes of waste, of which just over 35 tonnes was recycled, as shown in the below waste and recycling table. This waste is collected separately to domestic waste and includes those from council run public facilities such as libraries, leisure centres and community centres, but not schools. Therefore, initiatives here not only focus on council staff, but improving responses from the public through making recycling more accessible and clear.

### **Waste and recycling figures from council properties.**

Type	Amount	tCO <sub>2</sub> e
Glass	0.48	0.01
Commercial Waste	140.47	65.61
DMR (Dry Recyclables)	31.34	0.67
Food	3.324	0.03

Council targets for waste are aligned with the CEAP and therefore aims for a 70% recycling rate by 2030. This includes new practices already in place, such as the implementation of a zero single use plastics policy in staff areas, along with increased separation of food waste and dry recyclables.

## Buildings and Energy:

As the scope in this report now includes all council run sites, not just offices, this now represents by far the largest area of emissions, directly contributing 97.4% and 11,665.94tCO<sub>2</sub>e across all scopes. By excluding streetlighting, which the council has lower direct influence over, this figure would fall to 10,949.19 tCO<sub>2</sub>e.

In response, as explained fully in the plan, the council is currently implementing a wide range of energy efficiency improvements and renewable energy generation where possible at all current and future properties.

Meanwhile, the council is also working towards sourcing as much electricity as possible from green tariffs, with 75% of the current electricity purchased coming from these sources across the period. This means 4,498.07tCO<sub>2</sub>e of these emissions would be negated in this respect. Therefore, the remaining total council emissions would be 8,024.86 tCO<sub>2</sub>e, as shown above.

# APPENDIX

## APPENDIX 1. THE POLICY LANDSCAPE

WBC has established a strong track record for delivery of actions to address climate change, but the Council's influence is varied and complex across the different activities that occur within their own operations and the Borough.

This means partnership and collaboration – and the Council's role as an influencer and convenor – will be vital to achieving success, given that the majority of the emissions cuts needed rely on individual people and businesses taking up low-carbon solutions. With many of these decisions depending on having supporting infrastructure and systems in place, this is another key area the council are aiming to support change. However, the last year has been volatile and the below key summits and government strategies will continue to impact the outcomes of our actions.

**The COP27 Summit** in Nov 2022 restated the importance of a global commitment to tackling climate change due to the current estimations that the world temperature is on track to well exceed 2°C and cause intensive damage across the globe as a result. As such emphasis on meeting this goal and actions to do so in the face of challenges such as the energy crisis and covid were the primary focus, alongside nature based solutions.

**The IPCC Synthesis Report 2023** again highlights the importance of keeping the global temperature rise to below 1.5oC before 2040, and challenge this now presents, outlining the devastating impacts missing this target would have on global ecosystems, markets, and human settlements. Previous iterations of the IPCC report focused on what can be done now, to avoid this disaster, including: slashing coal usage and subsidies, removing CO2 from the atmosphere directly through carbon capture and storage, curbing demand from transport, accommodation and diets. This version expands on the above by examining and explaining the opportunities and importance of adaptation in response to the inevitable changes and climate impacts as a result of warming up to this threshold and beyond.

**The UK Climate Risk Assessment 2022** report assesses the future risks of climate change to the UK and emphasises the importance of incorporating adaptation into existing long-term plans and mitigation efforts. These include impacts on health and productivity, businesses and public services, deterioration in soil health and agricultural productivity, water availability and thereby our alternative energy supply. However, it also demonstrates that there are a range of options for improving resilience which represent good value for money.

**The Environment Act 2021** defines a number of new measures to protect biodiversity and the environment more widely as part of the 25-year Environment Plan. This includes centrally prescribed lists of materials that local authorities must collect for recycling, extended producer responsibility for packaging and a deposit return scheme for drinks containers. It also includes key measures on air quality, with local authorities receiving new powers, including the ability to declare an Air Quality Management Area (AQMA) and establish plans to reduce public exposure to air pollution which exceeds air quality targets.

**The Transport Decarbonisation Strategy 2021** targets more sustainable options such as electricity and hydrogen, outlining that the future approach is about doing the same things but in a more efficient way by the target date of net zero by 2050. It prioritises moving away from transport planning based on predicting future demand to provide capacity, towards planning that sets an outcome communities want to achieve and provides the transport solutions to deliver those outcomes.

**The Hydrogen Strategy 2021** examines the potential to provide energy, not just for vehicles, but as a renewable energy source. This will require a drastic change, encouraged by supporting new technology and opportunities in this sector by 2030. It also acknowledges the beneficial role hydrogen can play as a storage mechanism for excess renewable energy, helping to cover the traditional shortcomings in reliability from other renewable methods.

**The Net Zero Strategy 2021** encompasses all of the above strategies and carbon budgets, outlining the next steps to cut our emissions, seize green economic opportunities, and leverage further private investment into net zero by 2050. It targets doing so in a sustainable way that still supports growth by improving the effectiveness and therefore viability of low carbon options. Delivery plans and roadmaps of the specific investment under this strategy have since been released, including for carbon capture, hydrogen and heat pumps. These, alongside the carbon budget plan provide more specific detail to support authorities in planning and understanding potential funding sources.

**The Heat and Buildings Strategy 2021** sets out the actions that central government will be taking to reduce emissions from buildings in the near term (2035) and provides a long-term framework to enable industry to invest and deliver the transition to low-carbon heating, but focuses primarily on hydrogen. Unfortunately, despite the ambition, there remains no statutory powers or funding for local councils as part of this.

**The EV Infrastructure Strategy 2022** outlines the governments approach towards delivering the essential infrastructure to support the EV transition, along with the anticipated barriers and engagement elements, all supported by models for understanding the anticipated demand. The aim is to remove all these perceived and real barriers by developing the supporting network and encouraging chargepoint operators to expand their provision early, in order to deliver ahead of demand and so inspire future confidence in EV adoption, towards the goal of all new vehicles sold from 2035 being zero emission. This now includes an EV Smart charging action plan.

**The Department for Education's (DfE) Sustainability and Climate Change Strategy 2022** acknowledges the vital role education plays in helping to tackle climate change and creating a better, greener world for future generations, aiming for net zero by 2050. The strategy also sets out how local authorities will need to consider environmental sustainability, carbon reduction and energy efficiency to develop solutions for projects.

**The Green Finance Strategy 2023** sets out how the UK Government is working with a range of public financing bodies to commercialise and finance the green technologies needed for the transition, complementing steps taken through Powering Up Britain and the UK emissions trading scheme, to deliver cheap, clean British energy sources to heat our homes and power our industries. It includes how the UK will use our leadership and the expertise of our financial sector to accelerate the shift, alongside how nature and adaptation will play a part in delivering net zero by 2050.

**The Powering up Britain 2023** paper sets out how the government will enhance our country's energy security, seize the economic opportunities of the transition, and deliver on our net zero commitments by 2050.

**The Environmental Improvement Plan 2023** set out a comprehensive plan for halting and then reversing centuries of decline in nature in the next 25 years. It aims to deliver cleaner air and water in our cities and rural landscapes, protect threatened species and provide richer wildlife habitats This includes the introduction of 'Nature Markets', which enable private investment in nature, through creating units or credits that can be bought and sold. It also covers the growing problems of waste and soil degradation, alongside adaptation and the importance of sustainable development.

**The CCS (Crown Commercial Service) Carbon Reduction Policy 2022** affects local authorities across the country as this is the primary source of procurement for many. This policy sets out clear targets for reducing net Greenhouse Gas (GHG) emissions to zero by 2050.

## APPENDIX 2. WBC CARBON FOOTPRINT DATA

**Table 5: SCATTER Summary GHG inventory table of Borough Emissions**

Summary Greenhouse Gas emissions by Sub Sector	Total (KtCO <sub>2</sub> e)
<b>Residential buildings</b>	302.40
Commercial buildings & facilities	55.67
Institutional buildings & facilities	19.28
Industrial buildings & facilities	88.11
142 Agriculture	3.31
Fugitive emissions	23.85
On-road	426.37
Rail	13.35
Waterborne navigation	0.00
Aviation	93.21
Off-road	2.93
Solid waste disposal	4.99
Biological treatment	0.00

Summary Greenhouse Gas emissions by Sub Sector	Total (KtCO <sub>2</sub> e)
Incineration and open burning	0.62
Wastewater treatment and discharge	3.06
Industrial process	44.25
Industrial product use	0.00
Livestock	9.36
Land use	-17.38
Other AFOLU	0.00
Electricity-only generation	0.00
CHP generation	0.16
Heat/cold generation	0.00
Local renewable generation	0.00
<b>Total</b>	<b>1073.55</b>

**Table 6: DESNZ Summary GHG inventory table of Borough Emissions**

Wokingham Carbon footprint	KtCO <sub>2</sub> e
Industry and Commercial Electricity	57.97
Industry and Commercial Gas	35.81
Large Industrial Installations	0.04
Industrial and Commercial Other Fuels	16.18
Agriculture	4.84
Domestic Electricity	57.08
Domestic Gas	180.28
Domestic 'Other Fuels'	11.44
Road Transport (A roads)	61.25
Road Transport (Minor roads)	94.15
Transport Other	7.55
LULUCF Net Emissions	-16.02
<b>Total</b>	<b>505.74</b>

DESNZ data (table 5 and table 6) and SCATTER data (Left-side table) are compiled using different methodologies, but again follow the standard Greenhouse Gas Protocol. The SCATTER model (Setting City Area Targets and Trajectories for Emissions Reductions) operates on 2019 data. DESNZ data is from 2020, as these are the most recent available, with this being the data used for our comparisons as it is from a government source, more consistent and more directly applicable in terms of scopes we are able to capture.

The DESNZ data therefore shows us that the boroughs emissions are comprised of emissions from: transport 32%, the industrial and commercial sector 22%, and the domestic sector 49%, with a contribution of -3% from carbon sequestration efforts.

### What do the different emissions categories (or scopes) mean?

Direct = GHG emissions from sources located within the Local Authority Boundary (also referred to as Scope 1). For example petrol, diesel or natural gas.

Indirect = GHG emissions occurring as a consequence of the use of grid-supplied electricity, heat, steam and/or cooling within the city boundary (also referred to as Scope 2).

Other = All other GHG emissions that occur outside the city boundary as a result of activities taking place within the city boundary (also referred to as Scope 3).

## What do the different sectors and subsectors represent within the SCATTER Inventory?

The Direct Emissions Summary and Subsector categories are aligned to the World Resource Institute’s Global Protocol for Community-Scale Greenhouse Gas Emission Inventories (“GPC”), as accepted by CDP and the Global Covenant of Mayors.

- The DESNZ Local Emissions Summary represents Local Authority level data published annually by the Department for Energy and Net Zero.
- Stationary energy includes emissions associated with industrial buildings and facilities (e.g. gas & electricity).
- IPPU specifically relates to emissions that arise from production of products within the following industries: Iron and steel, Non-ferrous metals, Mineral products, Chemicals. These are derived from DUKES data (1.1-1.3 & 5.1).
- Waterborne Navigation and Aviation relate to trips that occur within the region. The figures are derived based on national data (Civil Aviation Authority & Department for Transport) and scaled to the City of Oxford region.

## Why does the DESNZ summary differ from the SCATTER summary?

- The DESNZ summary represents CO2 only; SCATTER also includes emissions factors for other greenhouse gases such as Nitrous Oxide (N2O) and Methane (CH4). These are reported as a CO2 ‘equivalents (e)’. The DESNZ summary does not provide scope split; SCATTER reports include scope 3 emissions (i.e. direct, indirect and other categories).
- SCATTER data includes further out of scope emissions even within scope 2, those being motorways and railways, which are not considered within the boroughs scope of influence and so are removed from DESNZ data.
- The DESNZ summary categories are not directly consistent or mapped to the DESNZ LA fuel data which is available as a separate data set. SCATTER uses published fuel data and applies current-year emissions factors, whereas the DESNZ data calculations scale down national emissions in each transport area. Specifically with regard to road transport, DESNZ data splits total emissions across road type; SCATTER uses fuel consumption for on-road transport per LA.
- Different treatment of ‘rural’ emissions i.e. Agriculture, Forestry and Other Land Use (AFOLU) and Land Use, Land Use Change & Forestry (LULUCF) categories are derived from different underlying data sets and have been explored further within section 3 of this report.

## APPENDIX 3. SUSTAINABLE DEVELOPMENT GOALS

The 2030 United Nations Agenda for Sustainable Development, provides a shared blueprint for peace and prosperity for people and the planet, now and into the future. At its heart are 17 Sustainable Development Goals (SDGs), which act as an urgent call for action to all countries - developed and developing - to work as a global partnership. They recognize that ending poverty and deprivation must go hand-in-hand with strategies that improve health and education, reduce inequality, and spur economic growth - at the same time as tackling climate change and working to preserve our oceans and forests.

### Wokingham Borough Council and the Sustainable Development Goals

In the table below each goal has been assigned an SDG number. For example, Good Health and Wellbeing is SDG3 and links back to the appropriate action in the Climate Emergency Action Plan demonstrating how Wokingham Borough are supporting the UN's 17 Sustainable Development Goals.

Wokingham Borough Council recognises that, as a local authority, we are in the best position to raise awareness and to influence the delivery of the Sustainable Development Goals.

<p><b>1</b> NO POVERTY</p> 	<p><b>1 NO POVERTY</b></p> <p>Although Wokingham is an affluent borough, we will work hard to ensure the Climate Emergency action plan creates a sustainable, carbon neutral economy that will achieve economic justice as well as economic growth.</p>
<p><b>2</b> ZERO HUNGER</p> 	<p><b>2 ZERO HUNGER</b></p> <p>As a rural borough, sustainable agricultural practice is of high importance as well as promoting sustainable eating in the borough through the action plan which focuses on cutting down on meat consumption.</p>
<p><b>3</b> GOOD HEALTH AND WELL-BEING</p> 	<p><b>3 GOOD HEALTH AND WELL-BEING</b></p> <p>We will be encouraging sustainable transport such as cycling and converting to electric vehicles through our action plan to ensure we maintain our high level of well-being across the borough</p>
<p><b>4</b> QUALITY EDUCATION</p> 	<p><b>4 QUALITY EDUCATION</b></p> <p>The youthful population are a large part of our action plan to meet our 2030 net zero carbon target and we aim to promote sustainable lifestyles throughout our schools and ensure we hear the voices of our children.</p>
<p><b>5</b> GENDER EQUALITY</p> 	<p><b>5 GENDER EQUALITY</b></p> <p>We hope the women and girls in the borough will take part to make the action plan the most effective in everyday situations like reducing waste and single use plastics.</p>
<p><b>6</b> CLEAN WATER AND SANITATION</p> 	<p><b>6 CLEAN WATER AND SANITATION</b></p> <p>There is a strong focus on reducing water waste in the Borough which will comply with the sustainable management of water targets sat beneath this SDG.</p>

146

<p><b>7</b> AFFORDABLE AND CLEAN ENERGY</p> 	<p><b>7 AFFORDABLE AND CLEAN ENERGY</b>                  We are determined to roll out sustainable energy generating methods through the implementation of solar panels, particularly in our SDLs, which are both clean and affordable in the long term.</p>
<p><b>8</b> DECENT WORK AND ECONOMIC GROWTH</p> 	<p><b>8 DECENT WORK AND ECONOMIC GROWTH</b>                  Wokingham Borough benefits from a below average unemployment rate and bringing more sustainable enterprises to the borough will only enhance our working population further.</p>
<p><b>9</b> INDUSTRY, INNOVATION AND INFRASTRUCTURE</p> 	<p><b>9 INDUSTRY, INNOVATION AND INFRASTRUCTURE</b>                  A large section of our action plan is dedicated to ensuring our new developments are net zero carbon through sustainable infrastructure and that we promote sustainable leaving within these new communities.</p>
<p><b>10</b> REDUCED INEQUALITIES</p> 	<p><b>10 REDUCED INEQUALITIES</b>                  The UK suffers from vast disparities in wealth but this can also be seen on a local scale within the Borough. We aim to work the Climate Emergency action plan with economic development in mind to ensure we achieve economic equality throughout the borough.</p>
<p><b>11</b> SUSTAINABLE CITIES AND COMMUNITIES</p> 	<p><b>11 SUSTAINABLE CITIES AND COMMUNITIES</b>                  Wokingham Borough is lucky to have an existent community that is resilient, inclusive and safe. We aim to build on this and strengthen this through the action plan to promote the same characteristics for the communities created in the new developments.</p>
<p><b>12</b> RESPONSIBLE CONSUMPTION AND PRODUCTION</p> 	<p><b>12 RESPONSIBLE CONSUMPTION AND PRODUCTION</b>                  The themes of this goal are woven throughout the action plan to promote and encourage a change in lifestyle of the residents in the borough starting with the council staff through the work of the Green Team.</p>

<p><b>13</b> CLIMATE ACTION</p> 	<p><b>13 CLIMATE ACTION</b>                  By working towards our 2030 net zero carbon borough target we have been able to put in place Officer groups and projects that reflect the targets under our action plan and enforce action to combat climate change.</p>
<p><b>14</b> LIFE BELOW WATER</p> 	<p><b>14 LIFE BELOW WATER</b>                  Protecting bodies of water is essential as they are facilities for residents to enjoy in green space for non-polluting recreational activities</p>
<p><b>15</b> LIFE ON LAND</p> 	<p><b>15 LIFE ON LAND</b>                  Protecting our greenspace as a rural borough is of huge significance and is reflected in the action plan, as we aim to preserve the land as a carbon sink or sustainably develop on land in a way that allows the whole borough to reap the sustainable rewards.</p>
<p><b>16</b> PEACE, JUSTICE AND STRONG INSTITUTIONS</p> 	<p><b>16 PEACE, JUSTICE AND STRONG INSTITUTIONS</b>                  As an influential institution in the borough, we take our role in combating climate change very seriously and will show our respect of our communities through public consultation and incorporating resident's ideas throughout.</p>
<p><b>17</b> PARTNERSHIPS FOR THE GOALS</p> 	<p><b>17 PARTNERSHIPS FOR THE GOALS</b>                  Creating partnerships are an essential aspect of our action plan, especially one which is tackling such a global problem. Partnerships, especially with the businesses in the borough, will allow us to achieve more.</p>

## APPENDIX 4. GLOSSARY

Term	Definition
<b>Carbon Baseline</b>	The year against which target decreases in emissions are measured.
<b>Carbon dioxide (CO2)</b>	Carbon dioxide is a gas in the Earth's atmosphere. It occurs naturally and is also a by-product of human activities such as burning fossil fuels. It is the principal greenhouse gas produced by human activity.
<b>Carbon Budget</b>	A tolerable quantity of greenhouse gas emissions that can be emitted in total over a specified time. The budget needs to be in line with what is scientifically required to keep global warming and thus climate change "tolerable."
<b>Carbon dioxide equivalent (CO2e)</b>	<p>Six greenhouse gases are limited by the Kyoto Protocol and each has a different global warming potential. The overall warming effect of this cocktail of gases is often expressed in terms of carbon dioxide equivalent - the amount of CO2 that would cause the same amount of warming.</p> <p>For consistency in this climate emergency action plan, the figures on carbon dioxide emissions have been presented in tonnes tCO<sub>2</sub>e</p>
<b>Carbon footprint</b>	The amount of carbon emitted by an individual, organisation, geographical area or during the manufacture of a product in a given period of time.

Term	Definition
<b>Carbon offsetting</b>	A way of compensating for emissions of CO2 by participating in, or funding, efforts to take CO2 out of the atmosphere. Offsetting often involves paying another party, somewhere else, to save emissions equivalent to those produced by your activity.
<b>Carbon Sequestration</b>	The process of storing carbon dioxide. This can happen naturally, as growing trees and plants turn CO2 into biomass (wood, leaves, and so on). It can also refer to the capture and storage of CO2 produced by industry.
<b>Climate Change</b>	A pattern of change affecting global or regional climate, as measured by yardsticks such as average temperature and rainfall, or an alteration in frequency of extreme weather conditions. This variation may be caused by both natural processes and human activity. Global warming is one aspect of climate change.
<b>Climate Change Act (2008)</b>	At the core of the Act is the 2050 target to reduce UK greenhouse gas emissions by at least 80% relative to 1990, and the system of carbon budgets that provide five-year stepping stones to the 2050 target. In 2019 this target was altered to achieve net zero emissions by 2050.
<b>Climate Emergency</b>	A situation in which urgent action is required to reduce or halt climate change and avoid potentially irreversible environmental damage resulting from it.

148

Term	Definition
<b>Climate Emergency Declaration</b>	The recognition of the urgency of the Climate Emergency by organisations, businesses or government at any level, often resulting in setting a target date to become carbon neutral.
<b>The Committee on Climate Change (CCC)</b>	An independent, statutory body established under the Climate Change Act 2008 whose purpose is to advise the UK and devolved governments on emissions targets and to report to Parliament on progress made in reducing greenhouse gas emissions and preparing for and adapting to the impacts of climate change.
<b>Fossil fuels</b>	Natural resources, such as coal, oil and natural gas, containing hydrocarbons. These fuels are formed in the Earth over millions of years and produce carbon dioxide when burnt.
<b>Global warming</b>	The steady rise in global average temperature in recent decades, which experts believe is largely caused by man-made greenhouse gas emissions. The long-term trend continues upwards, even though the warmest year on record, according to the UK's Met Office, is 1998.
<b>Greenhouse gases (GHGs)</b>	Natural and industrial gases that trap heat from the Earth and warm the surface. The Paris Agreement, following The Kyoto Protocol restricts emissions of six greenhouse gases: natural (carbon dioxide, nitrous oxide, and methane) and industrial (perfluorocarbons, hydrofluorocarbons, and sulphur hexafluoride).

Term	Definition
<b>The Inter-governmental Panel on Climate Change (IPCC)</b>	A scientific body established by the United Nations Environment Programme and the World Meteorological Organization. It reviews and assesses the most recent scientific, technical, and socio-economic work relevant to climate change, but does not carry out its own research. The IPCC was honoured with the 2007 Nobel Peace Prize.
<b>Land Use, Land-Use Change, and Forestry (LULUCF)</b>	Activities here provide a method of offsetting emissions, either by increasing the removal of greenhouse gases from the atmosphere (i.e. by planting trees or managing forests), or by reducing emissions (i.e. by curbing deforestation and the associated burning of wood).
<b>Mitigation</b>	Action that will reduce man-made climate change. This includes action to reduce greenhouse gas emissions or absorb greenhouse gases from the atmosphere.
<b>Net zero carbon / Carbon Neutral</b>	Net zero: A scenario in which GHG emissions arising from human activity are eliminated by minimising energy demands and meeting remaining energy demand with energy from renewable sources. In exceptional circumstances where elimination of GHG emissions from the activity is not possible, GHG emissions are minimised and offsetting local to the origin of the activity is used to equal any remaining emissions resulting in net zero.

149

Term	Definition
<b>Paris Agreement (2015)</b>	The Agreement's central aim is to strengthen the global response to the threat of climate change by 21 countries agreeing to keep the global temperature rise this century well below 2 degrees Celsius above pre-industrial levels and to pursue efforts to limit the temperature increase even further to 1.5 degrees Celsius.
<b>Per-capita emissions</b>	The total amount of greenhouse gas emitted by a country per unit of population.
<b>Renewable energy</b>	Energy created from sources that can be replenished in a short period of time. The five renewable sources used most often are: biomass (such as wood and biogas), the movement of water, geothermal, wind, and solar.
<b>SAP Rating</b>	Definition of "The Standard Assessment Procedure (SAP) is the methodology used by the government to assess and compare the energy and environmental performance of dwellings.

Term	Definition
<b>SCATTER</b>	Standing for Setting City Area Targets and Trajectories for Emissions Reductions, SCATTER is a local authority focussed emissions tool, built to help create low-carbon local authorities. SCATTER provides local authorities and city regions with the opportunity to standardise their greenhouse gas reporting and align to international frameworks, including the setting of targets in line with the Paris Climate Agreement.
<b>The United Nations Framework Convention on Climate Change (UNFCCC)</b>	One of a series of international agreements on global environmental issues adopted at the 1992 Earth Summit in Rio de Janeiro. The UNFCCC aims to prevent "dangerous" human interference with the climate system. It entered into force on 21 March 1994 and has been ratified by 192 countries.
